

## The Challenge of Climate Change

Many parts of the Plan will help to address the climate and ecology emergencies. For instance, creating new foot and cycle paths to encourage safe alternatives to using the private car; creating new woodland and hedgerows to support wildlife and increase carbon capture. These ideas can be found in the relevant chapter of the Neighbourhood Plan.

In addition, the Plan contains new policies to prevent development making things worse in Critical Drainage Areas.

It also outlines a strategy to encourage the production and use of green energy. The Parish Council will develop this strategy and put it in to action. For instance, it has already installed recharging points in the Village Hall car park and solar panels to generate electricity for the Hall.
